

Getting Closer to Nature in the Search for Edible Wild Plants

Kocademir Ortaokulu 2021-2022 Eğitim-Öğretim Yılı e Twinning Projemiz;

Yenilebilir yabani bitki arayışında doğaya yaklaşma

Proje hakkında

We have two starting points for this project. First, food resources are limited but people do not use them effectively. Traditional recipes made from wild plants are not favoured by young people under the pressure of fast food industry. But for the sake of a sustainable food future, the knowledge of edible wild plants and the local recipes with them should be inherited. Secondly, in the digital era, young generation live apart from nature. We want to show them how to spend effective time in nature apart from only having a picnic and leaving the rubbish in the picnic area. Within the context of searching for edible wild plants, we aim to organize activities making our students get more interested in the nature around them. Starting from the school backyards, we will have a closer look at the plants. During trekkings in nature we will inform them about the wild plants, which are edible which are not. We will also be engaged with learning local recipes with edible wild plants.
